## FOREWORD

This publication contains estimates of expenditures on four principal components of personal health care in Canada and the provinces from 1960 to 1971. Ratios of expenditure to population and gross national product, and rates of increase have been calculated.

We acknowledge with thanks the kind assistance of various departments and officials of professional organizations.

Data were contributed by various officers of the Health Economics and Statistics Directorate, and the tables were prepared in the Health Expenditure and Resources Section, under the supervision of Arthur F. Smith.

A handwritten signature in cursive script, reading "William A. Mennie". The signature is written in dark ink and is positioned above the printed name and title.

William A. Mennie, Director,  
Health Economics and Statistics,  
Health Programs Branch.

## EXPENDITURE ON PERSONAL HEALTH CARE IN CANADA

1960-1971

The following review covers the four principal components of personal health care expenditures: hospital services, physicians' services, dentists' services, and prescribed drugs <sup>(1)</sup>. These are estimated to represent about 90% of all expenditures for personal health care; that is to say, of all expenditures on the direct provision of health services to individuals. Not counted are expenditures on community public health, professional training and research, and outlays for construction of health facilities.

### Combined Expenditure

Combined expenditure for hospital care, physicians, dentists, and prescribed drugs reached an estimated \$5,110 million in 1971, an increase of more than \$600 million over the previous year (Table 1). The overall percentage increase over the previous year was 14.1 (Table 2). Combined expenditures are presented in Table 4 as a percentage of the GNP at market prices. Their total rose from 5.2% in 1970 to 5.5% in 1971. The national per capita expenditure moved up from \$210 in 1970 to \$237 in 1971 (Table 3).

The rate of expenditure increase in 1971 was highest in Prince Edward Island, New Brunswick, Quebec, and the Territories, in all of which new medical care insurance programs came into effect during the year; and all of which had rather low levels of pre-medicare insurance coverage; all other provinces were below the national average rate of increase (Table 25.) Combined expenditure per capita in 1971 continued to be highest in Ontario (\$259) and Alberta (\$243). Next in order came Quebec (\$234), Manitoba (\$232), and British Columbia (\$226). Nova Scotia, Saskatchewan, and New Brunswick followed with \$205 per capita, \$198 per capita, and \$196 per capita respectively.

- 
- (1) Excluded from these data are services provided by chiropractors, osteopaths, private nurses, optometrists, and podiatrists, as well as eyeglasses, appliances, nonprescribed drugs, and nursing home care.

Trailing the other provinces were the Territories at \$161 per capita, Prince Edward Island at \$156 per capita, and Newfoundland at \$154 per capita (Table 34).

### Hospital Care

Hospital care expenditures (preliminary estimates) grew less rapidly than in previous years, although the total reached \$3,152 million in 1971 (Table 1), and as a percentage of GNP, hospitals accounted for 3.4% in 1971, up from 3.3% in 1970 (Table 4).

The bulk of hospital care expenditures are incurred by general and allied special hospitals included in the hospital insurance program. These increased by 12.7%, down a bit from previous years. Mental hospital expenditures only went up by 7.3%, while expenditures on tuberculosis sanatoria declined considerably due to further closing of these facilities.

Among provinces and for all hospitals combined, the highest rate of growth in expenditure was experienced by New Brunswick, Manitoba, and the Territories in 1971 (Table 21). Per capita expenditure on hospital services continued to be highest in Ontario, Quebec, and Alberta, ranging from \$154 to \$147. Manitoba was in fourth place with \$139 followed by Nova Scotia at \$136. Saskatchewan and British Columbia spent approximately \$127 per person, and were followed by the Territories at \$116, Newfoundland at \$106, and Prince Edward Island at \$93 (Table 30).

### Physicians' Services

Estimated expenditures on physicians' services in 1971 increased by an unprecedented 20% over the previous year to \$1,236 million (Tables 1 & 2). The unusual overall growth was mainly a consequence of the commencement of provincial medical care programs in Prince Edward Island, New Brunswick, and particularly Quebec, and the previous, low level of insurance coverage (1).

- 
- (1) Additional factors in Quebec were an unusually low level of expenditure in 1970 because of a temporary withdrawal of services by many physicians, various social disturbances, and the time lag in payments to physicians by the new medical care program which began in November, 1970.

In Quebec and Prince Edward Island there were 50% increases, and in New Brunswick a 25% increase in 1971 (Table 22). It may be noted that a number of provinces which had begun their medical care programs in 1968 and 1969 experienced increases of less than 10% in 1971 as compared to the previous year. These were Newfoundland, Nova Scotia, Manitoba, Saskatchewan, and British Columbia.

The national average per capita expenditure on physicians' services was \$57.24 in 1971, as compared to \$48.24 in 1970. The national average per capita expenditure on physicians' services was, in 1971, exceeded by Ontario (\$65.87), British Columbia (\$62.14), and Alberta (\$62.02). Below the national average were Manitoba (\$57.11), Quebec (\$51.63), Nova Scotia (\$45.52), Saskatchewan (\$43.76), Prince Edward Island (\$40.72), New Brunswick (\$36.55), and Newfoundland (\$33.24) (Table 31).

#### Dentists' Services

The amount spent on dentists' services was \$299 million in 1971, an increase of 14% over the previous year (Tables 1 & 2). Growth was above 10% in all but two provinces: Nova Scotia and Saskatchewan (Table 23).

The average per capita expenditure was \$13.84, being exceeded in British Columbia (\$20.06), Ontario (\$18.34), and Alberta (\$15.37). Manitoba was fairly close to the national average at \$12.99. The other provinces were far below: Saskatchewan (\$9.18), Quebec (\$8.70), Prince Edward Island (\$8.05), Nova Scotia (\$7.98), New Brunswick (\$7.21), Newfoundland (\$4.78) (Table 32).

#### Prescribed Drugs

Estimated expenditures on prescribed drugs purchased from retail drug outlets amounted to \$422 million in 1971, up from \$360 million the year before (Table 1). Additional data on a province-by-province basis are presented but should be interpreted with caution because of some weaknesses in the sampling procedure used (see Appendix 1).

## APPENDIX 1 - Scope and Methodology

### Scope

The data relate to four principal components of personal health care: hospital services; physicians' services; dentists' services; and prescribed drugs. Certain expenses that, although necessary for health care, are not incurred on behalf of individuals, have been excluded. Among these are expenses for buildings, research, administration, and training of personnel and for public health activities concerning air, water, sewage, contagious-disease control, and food inspection. On the other hand, some items that do not directly pertain to personal health care are included. Thus, for instance, hospital care includes the cost of the training of nurses in hospitals, and the income of physicians includes fees for examinations on behalf of employers and insurance agencies.

Excluded from the study for various reasons are a number of forms of personal health care. Among these are care in nursing homes, school health services, and treatment in certain clinics for special disorders (mental disorders, cancer, arthritis, and rheumatism), as well as services provided by chiropractors, osteopaths, private nurses, optometrists, podiatrists, and drugless practitioners. Also excluded are expenditures on appliances (except dentures that dentists supply as part of their service) and on medicines sold without prescription.

### Hospital Services

"General and allied special" hospitals include public and private general hospitals, maternity hospitals, and hospitals for chronic diseases and for convalescents; excluded are psychiatric institutions, tuberculosis sanatoria, and all hospitals of the government of Canada. The figures represent the operating expenses of these hospitals excluding capital costs, but including depreciation charged. The public general and allied special hospitals in this group (budget-review hospitals) provide annual statements of expenses to the Department through provincial authorities. For the private general and allied special hospitals (contract hospitals) figures are based on the amounts that provincial hospital-insurance authorities paid them for treating patients.

The figures for 1960 are based on financial statistics of Statistics Canada for the public hospitals, and on estimates for the private hospitals. The 1971 preliminary figures are taken from the annual returns of hospitals (H.S.2 forms) and from preliminary data on provincial payments to contract hospitals.

Expenditure data for tuberculosis sanatoria and for public mental hospitals are derived from annual publications of Statistics Canada, and those for the private mental hospitals are estimates. The group "mental hospitals" includes also those classed by Statistics Canada as psychiatric hospitals, hospitals for emotionally disturbed children, hospitals for alcohol and drug addicts, psychiatric institutions for the aged and senile, and hospitals for epileptics.

Expenditures by hospitals operated by the Departments of National Health and Welfare and of Veterans Affairs are obtained from "Public Accounts of Canada" and converted from fiscal year to calendar year. Estimates for the expenditures of the hospitals of the Department of National Defence are incorporated only for the years 1961 - 1971, and are based on information received from that Department and on the operating costs of other hospitals of similar size. In the figures for 1960 they were omitted.

The four classes of hospital are administrative rather than functional categories. Thus, services of general hospitals include treatment of psychiatric patients in their psychiatric units and general wards, as well as the treatment of patients with tuberculosis in special units. Most mental hospitals care for some patients without mental disorders, and a few mental hospitals have tuberculosis units. Tuberculosis sanatoria have been admitting more and more patients with diseases other than tuberculosis. The hospitals of the government of Canada also treat many psychiatric patients and patients with tuberculosis.

#### Physicians' Services

Physicians' services represent fees earned by physicians in private practice. The figures are taken from "Earnings of Physicians in Canada, 1959 - 1970" (Department of National Health and Welfare). The methodology is explained in that publication. The figures for 1971 have been derived from unpublished data.

### Dentists' Services

Similarly, dentists' services represent earnings of dentists from private practice; the data are from "Earnings of Dentists in Canada 1959 - 1968" (Department of National Health and Welfare), where the method of calculation is explained, and figures for 1969 to 1971 have been derived from unpublished data.

### Drugs

Estimates for drug expenditure are based on the following sources:

- (1) Estimated total prescription sales in retail pharmacies in Canada for each of the years 1960 to 1966, and 1968 to 1971 Canadian Pharmaceutical Association (C.P.A.), "Annual Survey of Retail Pharmacy".
- (2) Estimates of total prescription sales in retail pharmacies by province, 1967 - "Report of Drug Expenditure Survey 1967", Department of National Health and Welfare.
- (3) Proportion of prescription sales to total sales in retail pharmacies by province for the years 1959 - 1966, and 1968 to 1970, except for the Atlantic Provinces for the years 1959 - 1961 -- C.P.A.
- (4) Estimates of total sales of retail pharmacies by province - "Retail Sales" (annual), Statistics Canada.

All data for 1967 in this publication are taken from item (2)

The Canada totals for the other years are taken from item (1), except that the figures for 1969 and 1970 have been modified by the application of moving averages to the data for 1968, 1969, 1970, and 1971.

In calculating the provincial estimates the proportion of prescription sales (item 3) was adjusted in order to attenuate fluctuations that were due to sampling error by calculating for

each year in question the mean of that year, the preceding year, and the following year, except for 1971, for which the given proportion was used, and except for British Columbia for 1970 and 1971, for which the 1969 proportion was used (the data for 1970 and 1971 had been particularly discontinuous with those for earlier years for that province). For the Atlantic provinces where data for the years 1959 - 1961 were not available, the proportions for 1962 were used.

These proportions were then applied to the total sales of retail pharmacies (item 4) and each resulting figure multiplied by a constant for the year in question, such that the sum of the provincial figures would equal the total estimate of item (1). The figures for the territories were calculated by prorating the estimates for British Columbia according to the populations.

To the foregoing, which represents sales of prescribed drugs by retail drugstores, a further estimate representing such sales by other stores has been added. The amount for 1961 was derived from the 1961 Census (1), and the amount for 1968 came from the 1968 Retail Commodity Survey (2). The figures for the other years were derived by interpolation and extrapolation.

- 
- (1) Statistics Canada, 1961 Census of Canada Bulletin 6.1-7, Retail Trade Establishments Analysis of Sales by Commodity, total non-drugstore sales of prescribed drugs (p. 24-39, line 48).
  - (2) Statistics Canada, Retail Commodity Survey 1968 (catalogue no. 63-518), non-drugstore sales of prescribed drugs (p. 80, lines 551 and 553).
